

IRIDIUM

# IRIDIUM

Iridium is a study that investigates the reactions of light on different glaze applications.

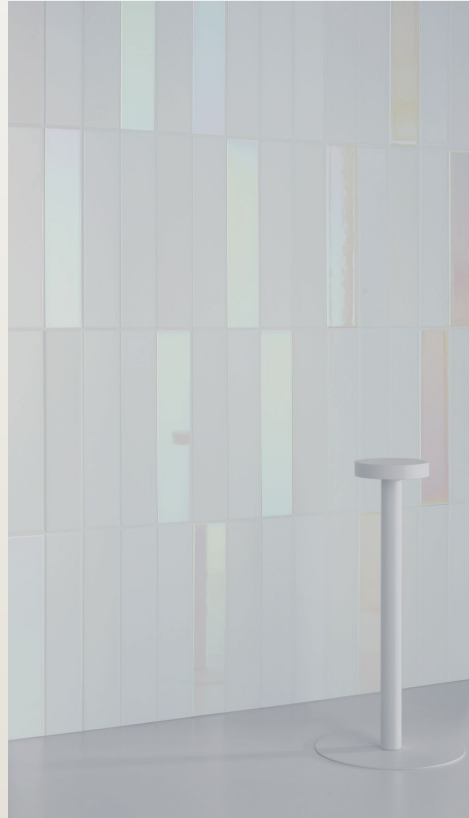

After many tests in the ceramics field, It has been founded that the holographic finish is capable of drawing the light spectrum, thus Hologram was born, a glossy surface that takes on different colors with the changing of light.

Applied on 4x12 inches surface, Iridium evolves in white colors it has glossy surface a holographic finish that creates an iridescent visual rhythm and redefines contemporary surfaces.
